Twin Dog Clutch

HAMMER MECHANISMS

Single Dog Clutch

The single dog clutch hammer mechanism provides 1 blow per revolution. With only three moving parts, this impact mechanism is extremely powerful and very durable. Excellent for use in heavy duty industrial applications.

Pin Type Clutch

The pin type clutch hammer has a rotating mechanism in which the round hammer pins move up and down, engaging the anvil shank and producing a powerful impact. Although, the clutch assembly is smaller and lighter than others it produces higher torque with minimum vibration.

Twin Dog Clutch

This hammer mechanism has 2 identical hammers that deliver an instantaneous balanced blow, reducing vibration and transferring more torque to the drive end of the anvil than any other mechanism on the market. This design is the most durable of hammer designs and is excellent for use in heavy duty industrial applications.

Single Hammer

The single hammer mechanism provides 1 blow per revolution. This means greater hitting power, longer life and easy maintenance. This type of mechanism is recommended for medium duty use.
